

YOUR LOCAL POLLINATORS: DESIGNS FOR CONSERVATION

What pollinators are present in your community? What native plants in your region attract pollinators? Use the resources you found from the previous exercise *Pollinator Programs: Researching Local Resources* for your research. You can also use the resource listed below for additional information about your region.

Using this research, design a pollinator garden for your community. Select the plants you would include in your garden, and discuss the pollinators your garden would support.

Pollinator Partnership, *Ecoregional Planting Guides*

Extender Activity:

Through the link above, look at the Ecoregional Planting Guides for both your area and for a different area of the country. In what ways are the pollinators for the two ecosystems similar or different? How are the plants in the two ecosystems similar or different? What would be the same or different in designing a pollinator garden for each ecosystem?
