

# Ecosystem Observation 2

Spend 10 minutes in observation of a green space. This might be your yard, or it might be a park in your neighborhood. It can be the same green space as your last observation exercise, or it can be a new one.

Through either an illustration or a written profile, document your observations.

What plants do you see? What are their characteristics? Which plants are growing next to each other?

Do you see any animals? This includes any birds or insects. Are they interacting with any of the plants?

What do you see that is different from your last observation? What is the same? Are you noticing more details?
